

Model How Sensor Value evolves over time^o

- Sensor readings show 2 behaviors

~ Smooth drift and Sudden jump

Wind change slowly

if actuator change e.g. speed

Approach I^o

Both behaviors in Trans. Matrix P_0

Approach II^o Trans. Prob.

Smooth in matrix P

Sudden Matrix C
(control activation)

Result^o Take T_0 with lowest mMP_r

low $mMP_r \neq$ low Accum. DMG.
only Approx.
